

Application Building

Flask App (Step - 1)

Date	03 October 2022
Team ID	PNT2022TMID34894
Project Name	Project - Web Phishing Detection

Creating The Application Directory:

To begin, you need to create the directory that will host the example code, which is available in a GitHub repository.

As discussed in “How to Work with the Example Code” on page xiii, the most convenient way to do this is by checking out the code directly from GitHub using a Git client. T

he following commands download the example code from GitHub and initialize the application to version 1a, which is the initial version you will work with:

```
$ git clone https://github.com/miguelgrinberg/flasky.git  
$ cd flasky  
$ git checkout 1a
```

If you prefer not to use Git and instead manually type or copy the code, you can simply create an empty application directory as follows:

```
$ mkdir flasky  
$ cd flasky
```
